Corneal Crosslinking Procedure 2018-004

Corneal collagen cross-linking (CXL), FDA approved in 2016, uses ultraviolet-A light and a photosensitizer (riboflavin – vitamin B2) to strengthen bonds in the cornea to treat keratoconus.

Corneal Crosslinking may be indicated when ALL the following are present:

1	The provider documented a diagnosis of progressive keratoconus.
2	Contact lenses were tried or not tolerated or the patient was not deemed to be a candidate (due to dry eyes).
